## Abstract

This invention belongs to the genetic engineering field, and provides novel G protein-coupled receptor family proteins SREB1, SREB2 and SREB3 expressed in the central nervous system, genes coding for these proteins, screening methods using these proteins and so on.

As one of the methods for obtaining the G proteincoupled receptor proteins of the present invention, RT-PCR
is carried out using mRNA extracted from human or rat brain
tissue or brain-derived cells as the template and using two
primers interposing the entire portion or a part of the G
protein-coupled receptor protein translation region,
thereby obtaining cDNA corresponding to the G proteincoupled receptor protein or a part thereof, and the cDNA is
integrated into an appropriate expression vector and
expressed in a host cell.
